# Label requirements for Direct Materials - guidelines

## Objectives

The aim of the training material is to:

1

Get familiar with the Essity Label requirements for Direct materials

2

Understand label content and format requested by Essity

3

Implement consistent labelling of Direct material in line with Essity Systems and standards

# Label requirements for Direct Materials - guidelines

## Introduction

The raw material labels for suppliers must include essential details like material name, ID number, batch number, supplier name, and barcode, while ensuring compliance with Essity scanning systems and standards. These requirements help ensure traceability, quality control, and proper handling of raw materials throughout the supply chain

# Label requirements for Direct Materials - guidelines

## Format and content

- SIZE approved format A5 : 148x210mm
- There are three barcodes. For physical dimensions and content of these see the Field list. All three are of the type EAN-128, which indicates a Code-128 code where the first character is the FNC1 control character. For more details, visit official GS1 for local guidelines on requirements
